

PUSHKAR RAJ TIWARI

Senior Software Engineer — Full-Stack .NET & Angular | Cloud & DevOps | AI-Assisted Development

Charlotte, NC | PushkarRTiwari@gmail.com | linkedin.com/in/pushkarrtiwari

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience (6+ at Wells Fargo) building full-stack .NET and Angular applications, RESTful APIs, and integrations for enterprise-scale platforms, working within engineering teams of 17-20 and serving as a go-to contributor across 7+ applications. Experienced with CI/CD pipelines (GitHub Actions, Harness), containerization (OpenShift), and database change management (Liquibase), with a track record of driving legacy system modernization and measurable performance improvements. Microsoft Certified in Azure Fundamentals and Azure AI Fundamentals, with hands-on use of AI-assisted development tools (GitHub Copilot, Devin AI).

TECHNICAL SKILLS

- CI/CD & Containers: GitHub Actions, Harness, TFS (Azure DevOps predecessor), UCD, Red Hat OpenShift (OCP), JFrog Artifactory
- Database & Testing: SQL Server, SSIS, Liquibase (schema management), HyperExecute (test execution)
- Integration & Logging: Kafka (event-driven), RESTful APIs & Swagger, Splunk
- Cloud & AI Tooling: Microsoft Azure (AZ-900, AI-900; Azure Functions in personal projects), GitHub Copilot, Devin AI
- Back-End & Architecture: C#, .NET/.NET Core, ASP.NET MVC, Dapper, Domain-Driven Design, Clean Architecture, Node.js, C++
- Front-End: Angular (components, services, routing, reactive forms), Angular Material, TypeScript, JavaScript, RxJS, HTML, CSS

EXPERIENCE

Senior Software Engineer | Wells Fargo — Charlotte, NC

Jan 2022 – Present

- Served as a go-to contributor across 7+ applications within a 17-20 person Agile engineering team, regularly reviewing code and supporting teammates on complex implementation issues.
- Led a 3-4 engineer legacy-to-.NET Core modernization effort end-to-end — driving releases, integrating upstream APIs via Kafka, architecting .NET Core backend applications using Domain-Driven Design on Clean Architecture, with Dapper data access and clear API contracts, and taking ownership of root-cause fixes to improve production stability.
- Delivered Angular front-end features (Angular Material, TypeScript/JavaScript, CSS, RxJS, reactive forms, routing) against .NET REST APIs, writing unit tests for UI and server-side code and reviewing UI code for quality.
- Identified and escalated a critical post-release production issue, driving rapid root-cause resolution through a no-code fix and minimizing business impact.
- Configured log forwarding to Splunk and built saved queries to trace production issues to root cause.
- Built and maintained CI/CD pipelines with GitHub Actions and Harness, moving deployments from TFS to UCD to Harness; led the Harness migration.
- Managed relational database schema changes with Liquibase and used HyperExecute for automated test execution as part of the delivery pipeline.
- Proactively identified and implemented a performance optimization beyond original scope, refactoring I/O operations to reduce application load time from ~35 seconds to ~5 seconds.
- Improved code quality through SonarQube implementation and increased unit test coverage, while maintaining consistent adherence to secure coding and risk compliance standards throughout the SDLC.
- Completed hands-on training in Spring Boot (Java) and React, applied in a personal project to build full-stack experience.

Software Engineer | Wells Fargo — Charlotte, NC

Mar 2021 – Feb 2022

- Built Angular front-end modules (Angular Material, reactive forms, routing) integrated with .NET/C# REST services and backend data stores; contributed to design, testing, and debugging across the full stack.

Junior C# Developer | Wells Fargo — Charlotte, NC

Jun 2020 – Mar 2021

- Developed and maintained Angular UI components (including Angular Material) and C#/.NET application components under senior engineer guidance, building foundational full-stack experience.

Technology Analyst | Infosys — Charlotte, NC Area

Dec 2019 – Mar 2020

- Analyzed business requirements; created datamaps, API specifications, and Swagger API documentation.

Integration Developer | CUNA Mutual Group — Madison, WI Area

Nov 2018 – Sep 2019

- Built Angular components (JavaScript, HTML, CSS) and ASP.NET MVC/C#.NET web forms, with Node.js services and LINQ data access.
- Worked on SSIS data-integration projects against SQL Server databases.
- Used TFS (Azure DevOps predecessor) for source control, Kanban task boards, and build/deployment pipelines.

.NET Developer | Noble Idea Solution, LLC — Greater Omaha Area

Jul 2017 – Jun 2018

- Designed SQL Server databases; built reusable C# controls, GUI components, and ASP.NET MVC/Web Forms pages using ADO.NET.

Microsoft Student Partner | Microsoft Innovation Center — Kathmandu, Nepal

Jul 2013 – Jul 2014

- Liaised between college and Microsoft; built Windows desktop (WPF) and Windows Phone (XAML) apps.

EDUCATION & CERTIFICATIONS

Towson University — B.S., Computer Science (2016 – 2018)

Kantipur Engineering College, Tribhuvan University — B.E., Computer Engineering (2011 – 2014)

Certifications: Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft Certified: Azure AI Fundamentals (AI-900)
